

# LEED® PROJECT?

WE CAN HELP...

## Technical Report

### LEED® for New Construction

Mt. Carmel Stabilization Group is the leading Soil Stabilization company in North America with over 60 years of experience in providing expert soil stabilization services to our customers across the country. Our technical reports and case studies are an effort to educate our contractor partners, consultants and agencies on the merits of design, construction, and the environmental benefits of soil stabilization.

*WE'VE DONE THE RESEARCH, LET US HELP YOU GET THE CREDITS*

The United States Green Building Council's Leadership in Energy and Environmental Design (LEED) rating system is the benchmark for the design, construction and operation of green buildings. The LEED movement began in 2000 and since then it has grown to nationwide prominence. Today there are thousands of projects in design and construction across the country that are in the process of applying for a LEED rating. In an effort to better serve our customers, Mt. Carmel Stabilization Group has researched LEED for New Construction and we are now well suited to help our customers achieve LEED credits for the work that we do on these projects.

### In Design

Our project managers will work with your designated LEED project team members to ensure that the use of soil stabilization applications on the project will be included in your design submittal and that all aspects are properly documented including a submittal for Innovation in Design.

### In Construction

All Mt. Carmel Stabilization project managers are equipped with a template form that will be the basis of the submittal documents to your LEED project team. We can provide LEED project teams with estimates prior to our operation and detailed submittal documents following the completion of our operation. Our goal is to make credit achievement for our work on your project as simple and hassle free as possible.

### Which Credits? How Many?

The LEED rating system will have a dramatically different effect on each project based on several factors. As an example, our submittal could mean a jump in rating from Silver to Gold rating. Contact Mt. Carmel today to learn more about our impact on your LEED project.
